Results-oriented analyst with over a decade of experience in analyzing complex data and applying predictive modeling to drive strategic decisions. Expertise in actuarial principles and executive reporting supports data-driven pricing and analytics initiatives. Delivers actionable insights that enhance efficiency and improve outcomes, contributing to success and innovation in healthcare analytics.

Accomplishments

Developed predictive model to estimate customer insurance purchase behavior using real-world dataset Engineered 100+ features from time-series and categorical data to improve model performance Applied machine learning techniques to model multi-variable outcomes across 2,000+ possible combinations Achieved 53.12% prediction accuracy, closely approaching top competition score (53.74%) Demonstrated ability to work with large datasets, perform data cleaning, and build predictive models for insurance-related decisions.

Owned and managed the development, delivery, and quality of thousands of part numbers (the totality of a new electric vehicle) through both ad-hoc systems then transitioned to market standard ERP (SAP). Monitored, evaluated, modeled, and reported to executive leadership on all production control and logistics manufacturing.

Project managed and commercially executed the buildout of a complete automotive manufacturing plant within a budget of \$100M and timeline of less than 18 months. Responsible for all contracts and purchasing decisions to execute as well as budget tracking and navigation of executive approvals for all major investments weekly. Project completed on-time and under budget while also successfully negotiating general contractor claw-backs owing to careful documentation and tracking of deliverables throughout.

Skills

- Programming in Python, R, and VB.net
- Data & Analytics: Data Analysis, Data Modeling, Statistical Analysis (ANOVA, Multivariate), Natural Language Processing (NLP), Machine Learning, Data Visualization, Feature Engineering
- Tools: Microsoft Excel (Advanced), Power BI, Pandas, SQL, Seaborn, Scikit-Learn, SAP
- Other: Financial Analysis, Forecasting & Budgeting, Executive Reporting, Actuarial Science

Work history

2021 - Property Manager & Real Estate Investor

Current *Self-Employed*

- Modeled cash flow scenarios to support investment decisions and maximize returns on investments
- Managed financial performance of residential investment property through budgeting, forecasting, and ROI analysis to ensure sustained profitability
- Analyzed cost trends and capital expenditures to enhance long-term asset performance and inform strategic planning

2019 - Production Control & Logistics Manager

2020 *Karma Automotive*

- Analyzed supply chain constraints and implemented solutions to improve operational efficiency
- Optimized scheduling and inventory alignment to reduce delays
- Led production planning and material availability using SAP systems

2018 - Launch Manager, Materials

2019 *Karma Automotive*

- Designed data-driven BOM strategy to reduce material waste and enhance forecasting accuracy
- Developed logic-based material selection framework through equivalency modeling to optimize material choices
- Identified and mitigated material availability risks to ensure seamless production builds

2016 - Supervisor, Plant Purchasing

2018 *Karma Automotive*

- Developed procurement strategy and managed capital budgets to align with organizational goals
- Performed cost analysis and vendor evaluations to enhance sourcing decisions
- Collaborated with engineering, finance, and operations teams to streamline purchasing processes

Education

Bachelor of Actuarial Science: Actuarial Science

Oakland University - Rochester

- President, Society of Actuarial Science
- GPA: GPA 3.97

Certifications

- Financial Mathematics (SOA FM) Exam
- Probability (SOA P) Exam
- Bloomberg Aptitude Test: 95th percentile
- Anaconda Python for Data Science Professional Certified
- Machine Learning with Python Professional by Anaconda Certified
